PROFESSIONAL SUMMARY

Computer Science & Engineering student and software engineering intern who builds full-stack, real-time systems end to end — from database design and backend architecture to secure authentication and live UI updates. Track record spans healthcare queue management, fintech invoicing, mobile safety tools, voice-interface and robotics software, and embedded hardware, with a consistent focus on solving concrete operational problems (race conditions, security vulnerabilities, manual processes) rather than building demos.

WORK EXPERIENCE

Software Engineering Intern

- Contributed to a wake-word / voice-activation detection feature, working on the detection pipeline that lets a device respond to a spoken trigger phrase.
- Worked on the user-facing software interface for an AI robot, building and refining interaction flows between the user and the robot's software.
- Worked on Single Sign-On (SSO) and silent SSO functionality, enabling authenticated sessions to persist and re-authenticate users without repeated manual login.

EDUCATION

- Universal College of Engineering — Bachelor of Engineering, Computer Science & Engineering**
CGPA: 6.18 / 10
- R. P. Jr. College of Arts, Science & Commerce — Higher Secondary Certificate (HSC), Science**
- National English High School — Secondary School Certificate (SSC)**

PROJECTS

Well Queue — Nationwide Healthcare Queue Management System

Stack: Flutter, Node.js, PostgreSQL, Redis, Firebase

- Architected a full-stack patient queuing system covering real-time token generation, prescription management, and admin dashboards, with WebSocket-based live updates across hospital front-desk and patient views.
- Diagnosed and resolved a token-generation race condition under concurrent requests by implementing PostgreSQL advisory locks, and configured Firebase Auth with custom role-based claims to separate hospital staff, admin, and patient access.

Women Safety App

Stack: Flutter, Dart, MongoDB

- Built an Android application with an SOS alert system that shares live GPS location with trusted contacts in a single tap, designed for fast activation in emergency situations.
- Implemented background location tracking and contact-management flows to keep the alert path fast and reliable under real-world conditions.

BillKaro (formerly FreelanceOS) — SaaS Invoicing Platform for Freelancers

Stack: React, Node.js, MongoDB, JWT, Razorpay API, Microsoft Entra ID (MSAL), Recharts

- Built a full-stack invoicing platform with JWT authentication, client/project CRUD, a GST-compliant invoice engine, and Razorpay payment integration for end-to-end billing.
- Hardened the platform against IDOR and NoSQL injection vulnerabilities, and added Microsoft Entra ID (MSAL) SSO alongside an admin analytics panel built with Recharts.

Custom-Built Drone — Fully Operational Quadcopter Built from Scratch

Stack: Arduino (C/C++), custom PCB / ESCs

- Designed and assembled a fully operational quadcopter from scratch — frame, motors, ESCs, and power system — with a custom Arduino-based flight controller handling stabilization and motor control.

Gamified Running App

Stack: Flutter, Dart, MongoDB, GPS/Location APIs

- Built a map-based fitness app using real-time GPS tracking where users compete to capture territories while running, turning a solo activity into a competitive experience.

QR Code Attendance System

Stack: Flutter, Dart, Supabase, QR code library

- Built a system letting teachers generate session-specific QR codes for students to scan and mark attendance, replacing manual roll-call with a faster, error-resistant process.

WhatsApp Clone

Stack: React, Node.js, MongoDB, WebSockets

- Built a full-featured messaging application with real-time communication, secure user authentication, and persistent chat history using live message synchronization.

TECHNICAL SKILLS

Frontend: React, Android, Flutter

Backend: Node.js

Database: SQL, MongoDB, Firebase, PostgreSQL, Redis, Supabase, Database Design

Other: Git, GitHub, JWT Auth, SSO, Cyber Security, Cryptography, GPS, QR Code Tech, REST APIs, WebSockets

CERTIFICATIONS

- **AWS Academy Graduate** – Cloud Architecting (AWS)
- **Claude Code in Action** (Anthropic)
- **Deloitte Australia Technology Job Simulation** — Forage | August 2026
- **Commonwealth Bank Tech Explorer Job Simulation** — Forage | Aug 2026
